1. Clearly state the indeterminate form of the limit below. After this, evaluate the limit, stating the use of L' Hopital's rule wherever applicable.

$$\lim_{x \to 0^+} (1 + \sin 4x)^{\cot x}$$

2. Find the absolute maximum and minimum of $f(x) = x\sqrt{4 - x^2}$ on the interval $[-1, 2]$.

3. A box with an open top is to be constructed from a square piece of cardboard that is six feet on each side, by cutting out a square from each of the four corners and bending up the sides. What is the largest volume that such a box can have? Show all work. You may wish to draw a diagram to support your work. Recall $V = lwh$.

4. Let $f(x) = \frac{x-1}{x^2}$.

Part 1. List the function's domain, intercepts, and vertical or horizontal asymptotes.

Part 2. Use the first derivative to find the intervals where the function is increasing/decreasing. Also give the x values at which any local maxima or minima occur and their corresponding y-values.

$f'(x) = \dfrac{2-x}{x^3}$

f'

Part 3. Find the intervals where the function is concave up/concave down and points of inflection.

$f''(x) = \dfrac{2(x-3)}{x^4}$

f''

Using the earlier parts, sketch the graph of $f(x) = \frac{x-1}{x^2}$ on the next page.
